CircuitBridge Learning

Fictional business profile | Agentic Systems | Habib Shouman

Purpose and customers

Make practical AI and electronics education approachable through small, guided workshops for adult learners. Adult beginners, university students, and small teams who want applied technical skills.

Small groups, plain-language explanations, and a tangible project in each workshop; transparent published tuition and prerequisites.

Workshop catalog

Workshop	Delivery and sessions	Tuition	Prerequisites and outcome
AI Foundations	Live online; 4 sessions	USD 80 per learner	No coding prerequisite. A guided no-code AI classification exercise.
Python Launchpad	Live online; 3 sessions	USD 60 per learner	No coding prerequisite. A small Python data-cleaning script.
Edge AI Lab	In person in Beirut by arrangement; 6 sessions	USD 180 per learner	Basic Python and basic electronics. A guided sensor-data inference prototype.

Fictional team

Leila Farah - Fictional curriculum lead. Designs beginner-friendly AI and Python lessons.

Karim Nassar - Fictional electronics mentor. Develops practical sensor and edge-computing exercises.

Mira Haddad - Fictional learner-support coordinator. Helps learners compare workshops and records follow-up requests.

Operating policies and boundaries

Monday to Friday, 09:00-17:00, Asia/Beirut time

Groups of 5 to 12 learners receive 10% off published tuition. Groups larger than 12 require a separate inquiry.

One free reschedule is available with at least 48 hours of notice.

Estimates cover tuition only. Tax status is not published. A quote does not reserve a place or confirm availability.

Dates, remaining seats, exact venue, and instructor availability are not published. The assistant cannot confirm bookings.

Refund terms, accreditation, placement statistics, tax treatment, and scholarships are not published.

Use the assistant to request follow-up. No working public email address is provided in this fictional exercise.

The demonstration stores authorized lead details and feedback in local JSONL files. Explicit requests not to log are respected by the tools and persistent trace writer. This is a teaching prototype, without a production retention or access-control service.
